The image features a white background with four decorative clusters of colored squares in the corners. The top-left cluster consists of a 3x3 grid of squares in shades of dark teal, light green, and dark navy. The top-right cluster is a 3x3 grid of squares in shades of red, orange, and dark red. The bottom-left cluster is a 3x3 grid of squares in shades of orange and yellow. The bottom-right cluster is a 3x3 grid of squares in shades of green and teal. In the center of the image, the text ".NET Core 2.0" is displayed in a light blue, sans-serif font.

CONTENT

What We Will Talk About

.NET Core 2.0

- .NET Core 2.0 overview
- Announcements
- Demo

ASP.NET Core 2.0

- Developers Delight
- Extending the App Models
- Happy in the cloud

.NET Core 2.0

SPEED

Fastest version of .NET

Growth

More APIs

More project templates

More distros

Simplification

Simplified packaging

Tools

New improved Visual Studio tooling

Visual Studio for Mac Support

Thank you to all our contributors!

Community PRs by month

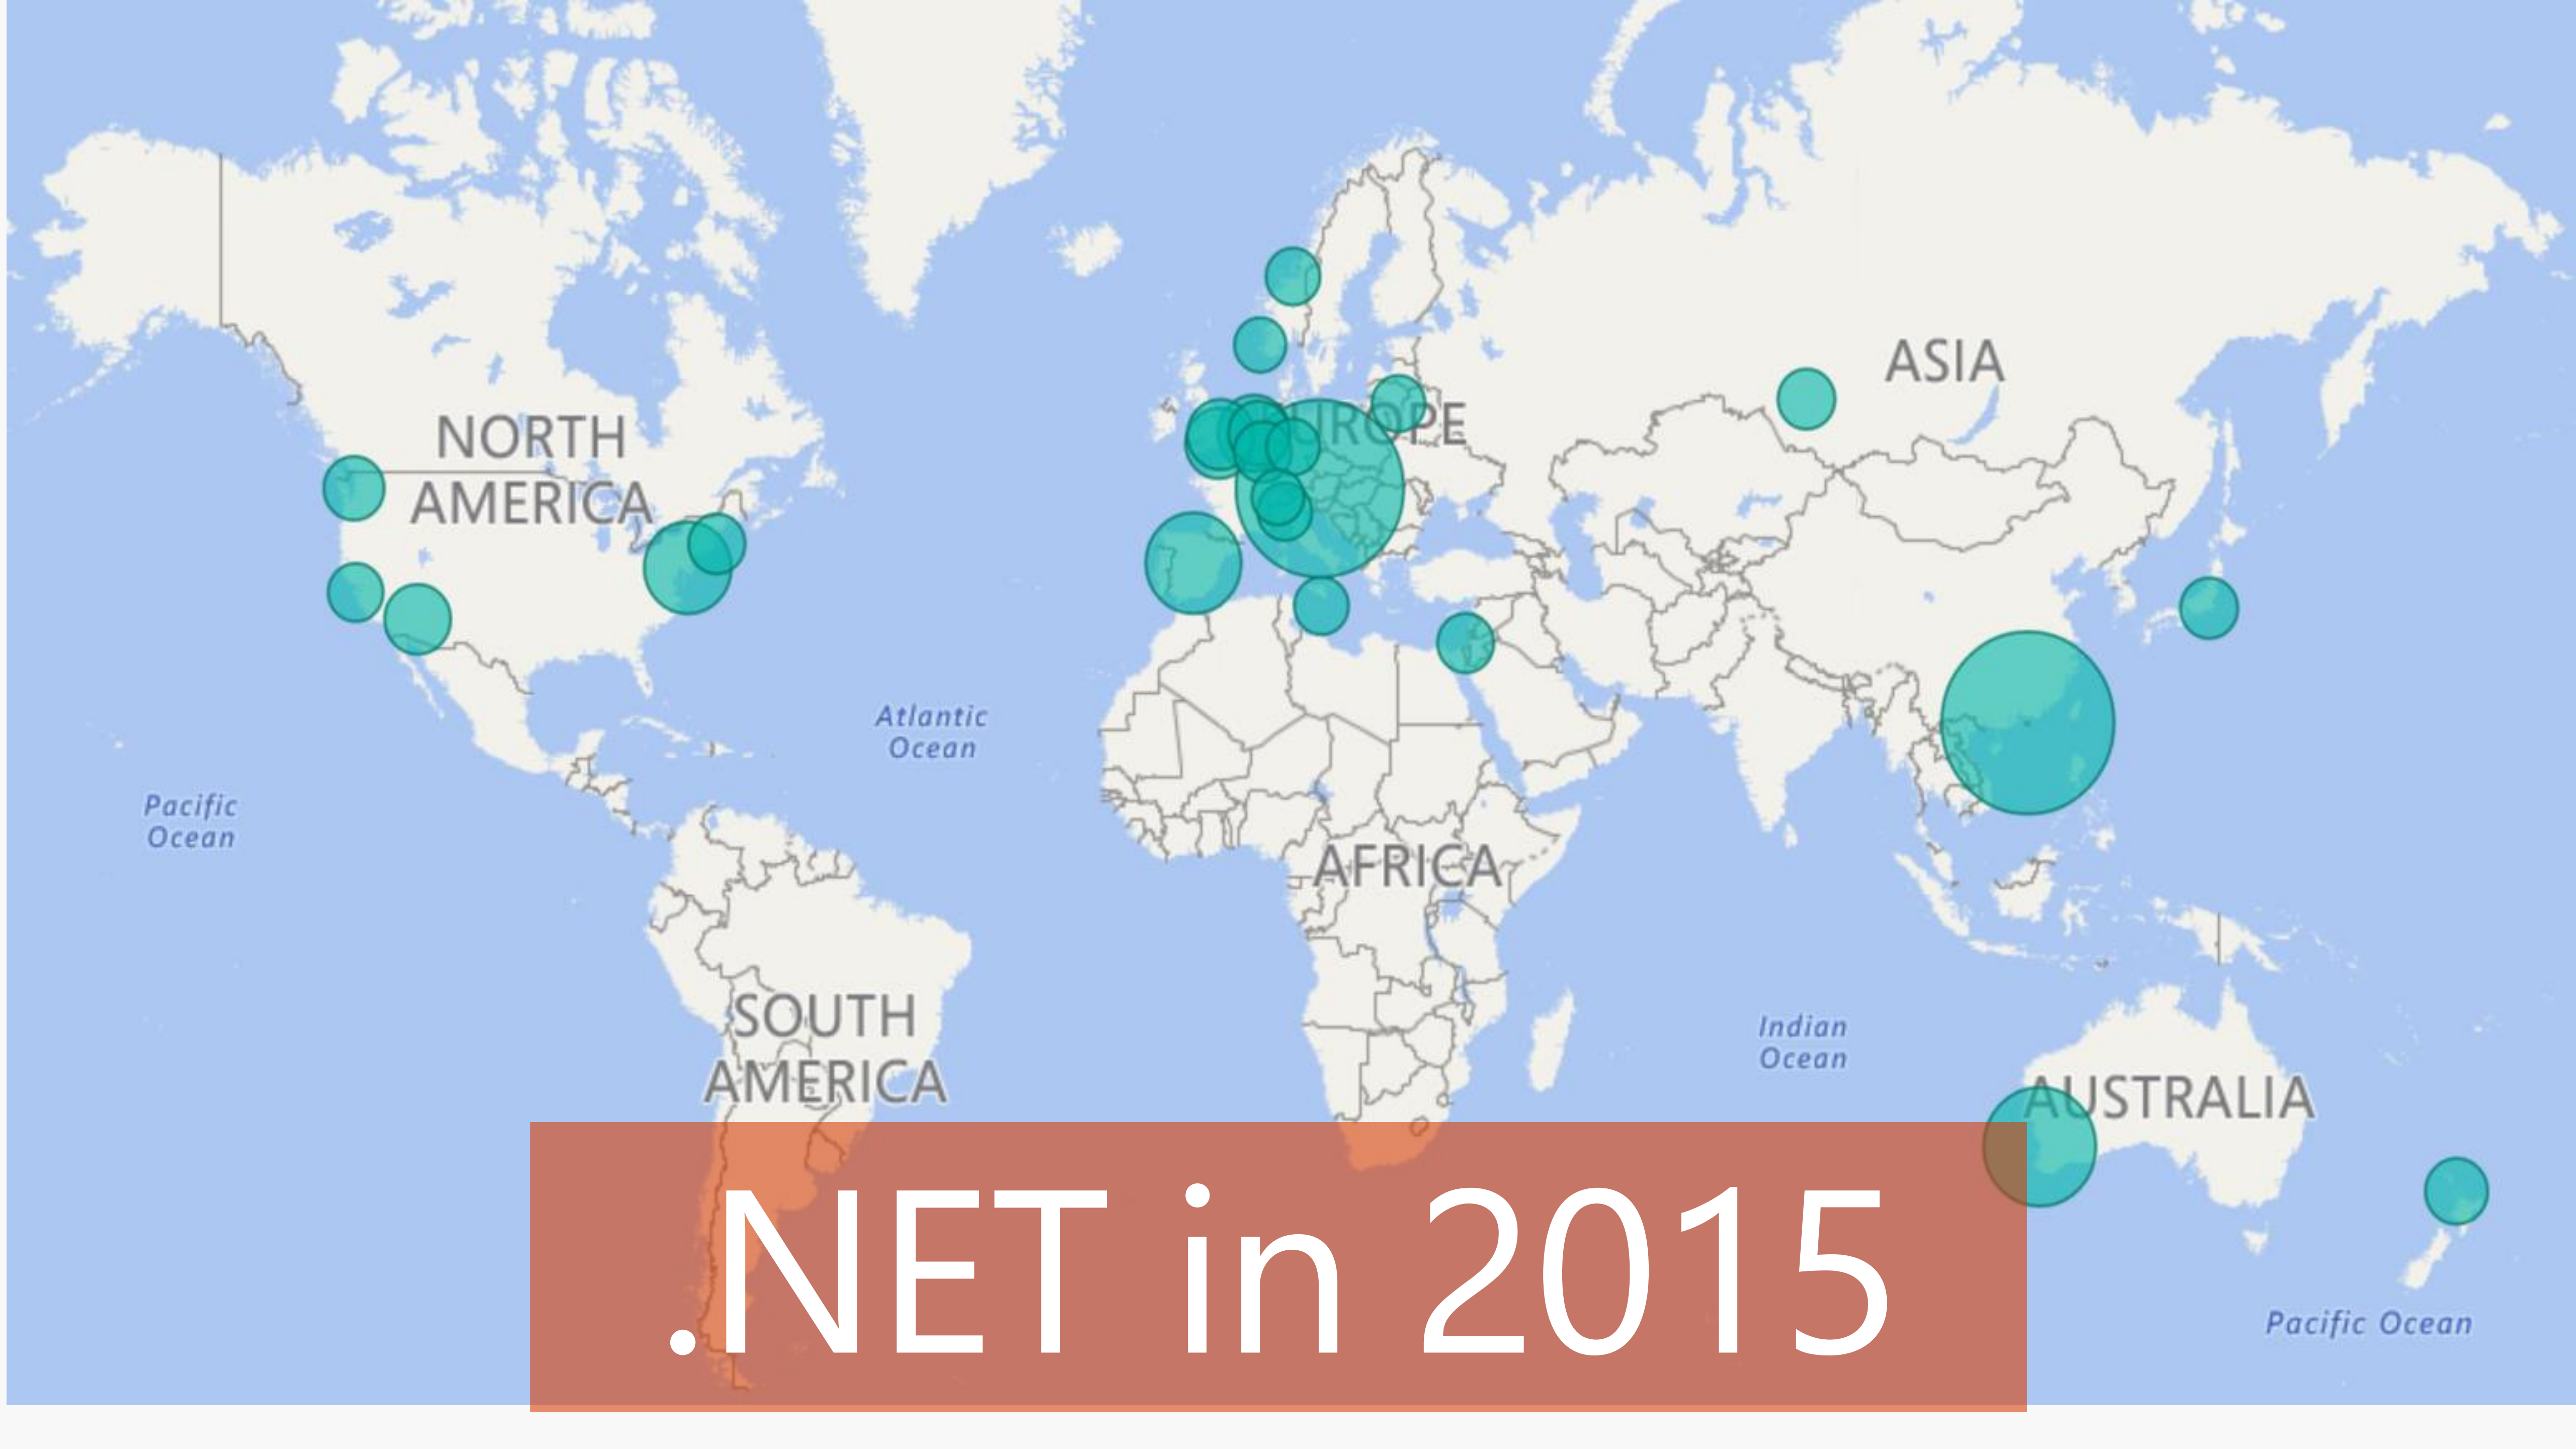

"Samsung is embracing .NET because it is a completely open source project." — Samsung

"ASP.NET is open source, that allows us to contribute back to it if we have any performance issues which Microsoft review and together we make a better product."

— Illyriad Games

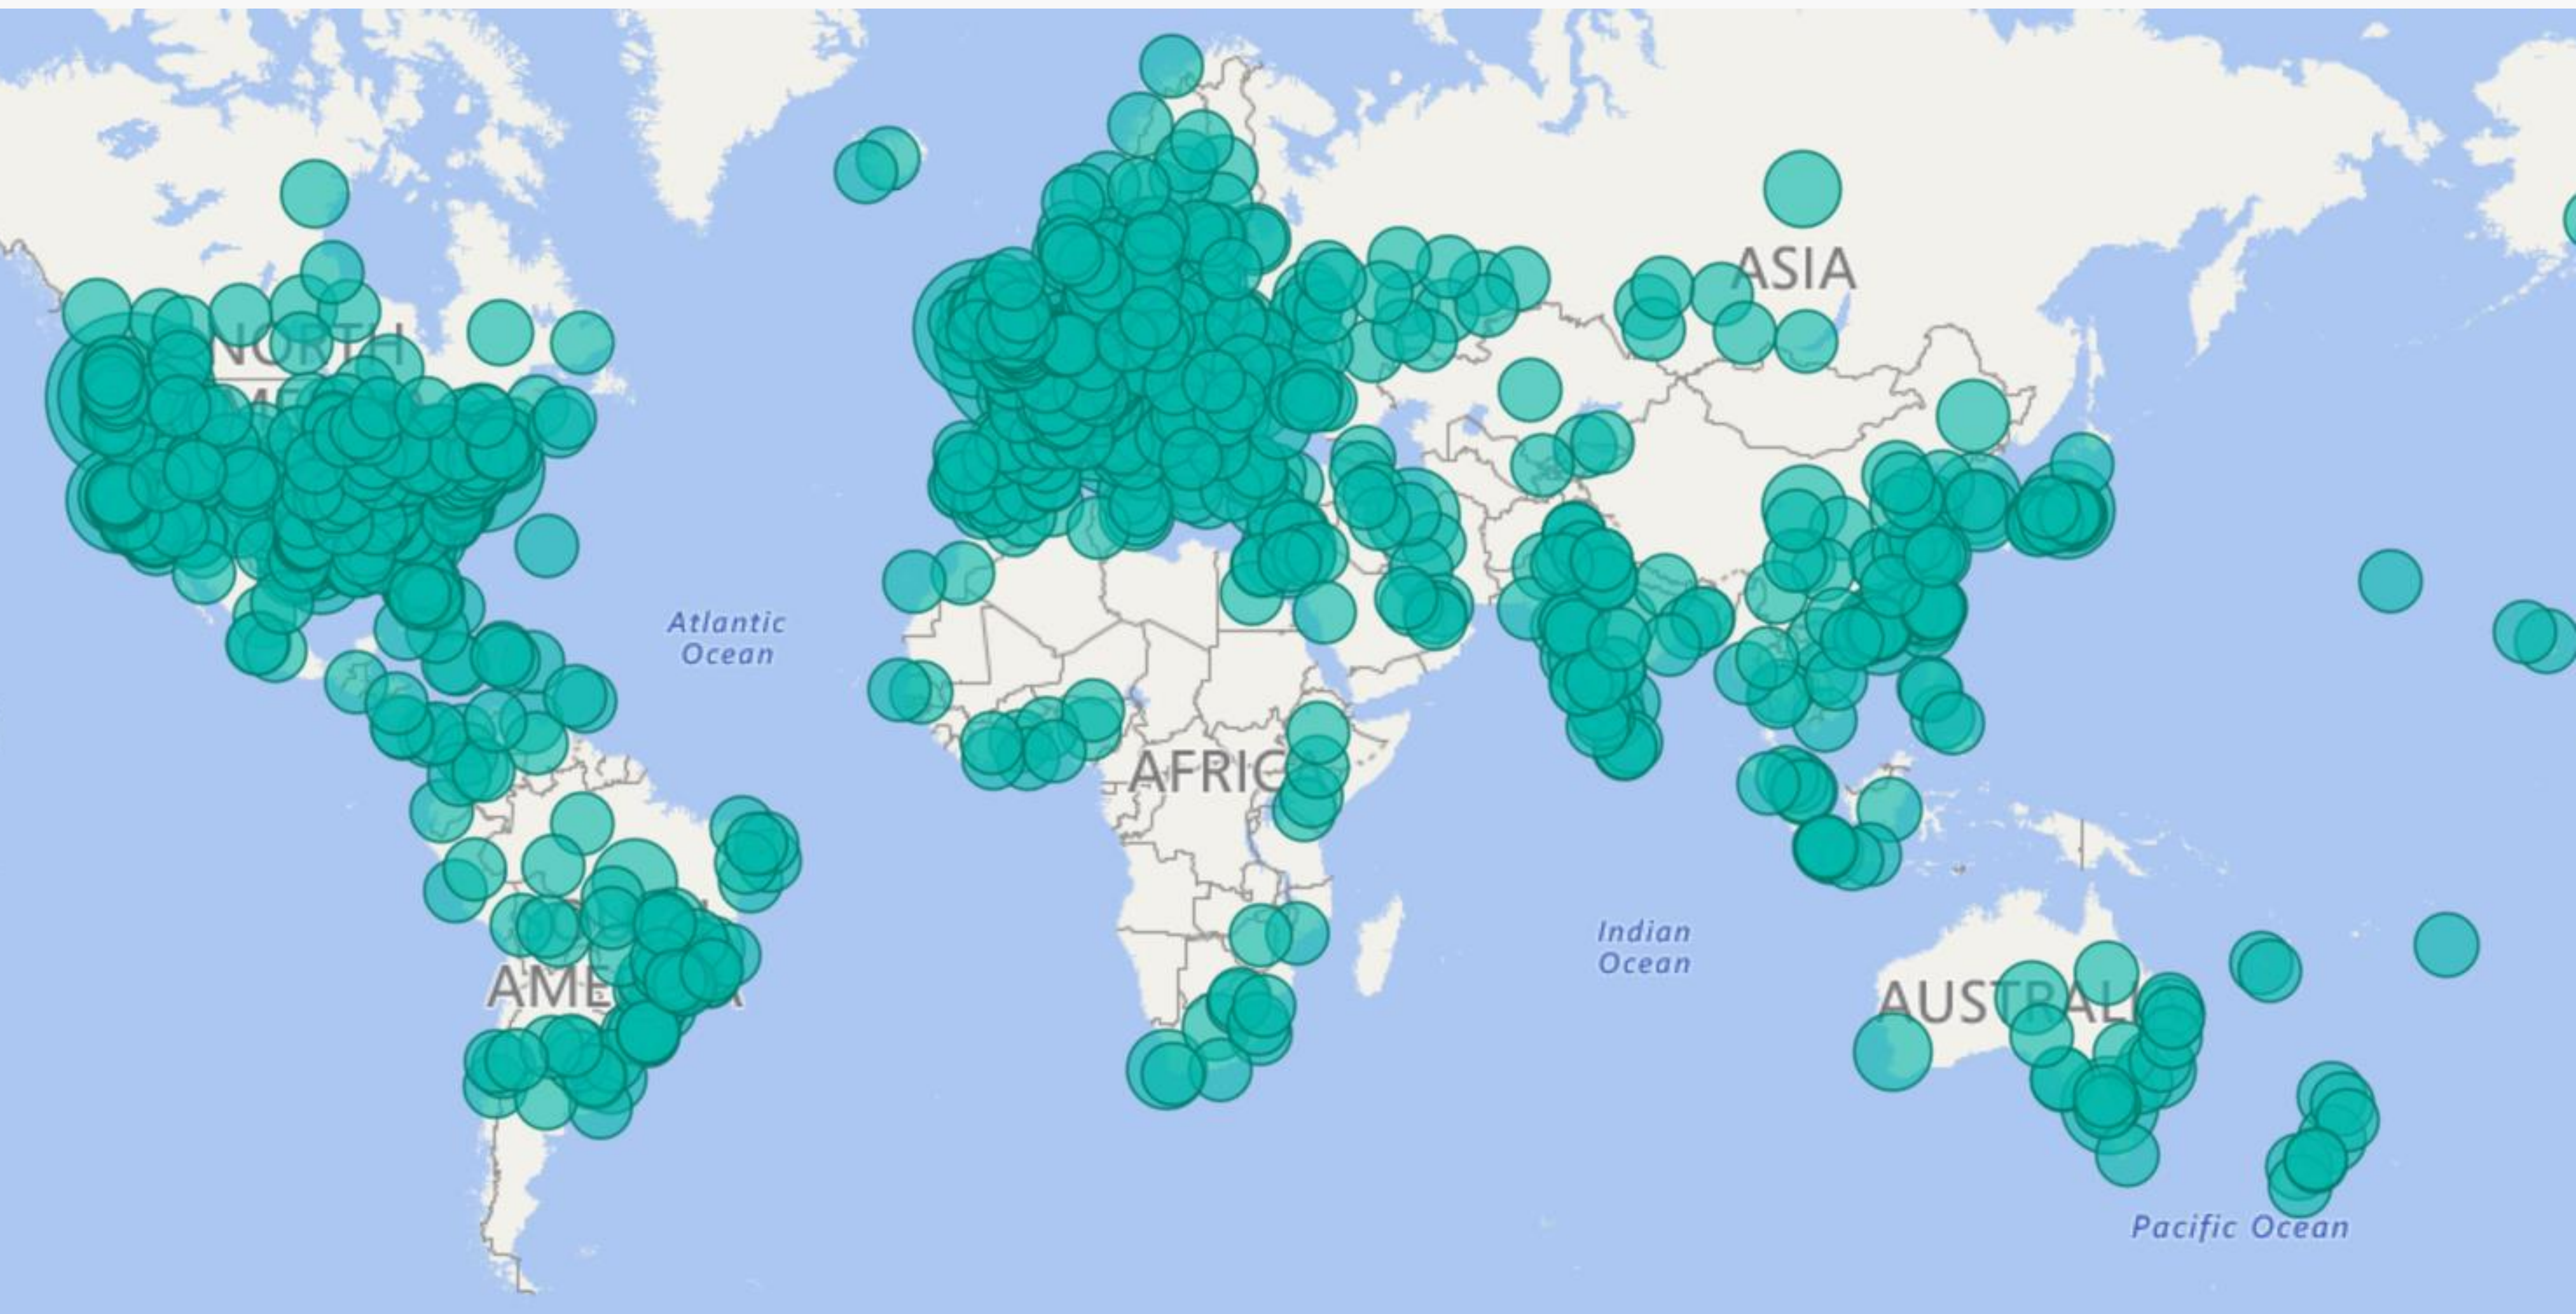

.NET in 2015

.NET in 2016

.NET Standard 2.0 Released!

Has much bigger API surface

Extended to cover intersection between .NET Framework and Xamarin

Also makes .NET Core 2.0 bigger as it implements .NET Standard 2.0

+20K

More APIs than
.NET Standard 1.x

Can reference .NET Framework libraries

Compatibility shim allows referencing existing .NET Framework binaries

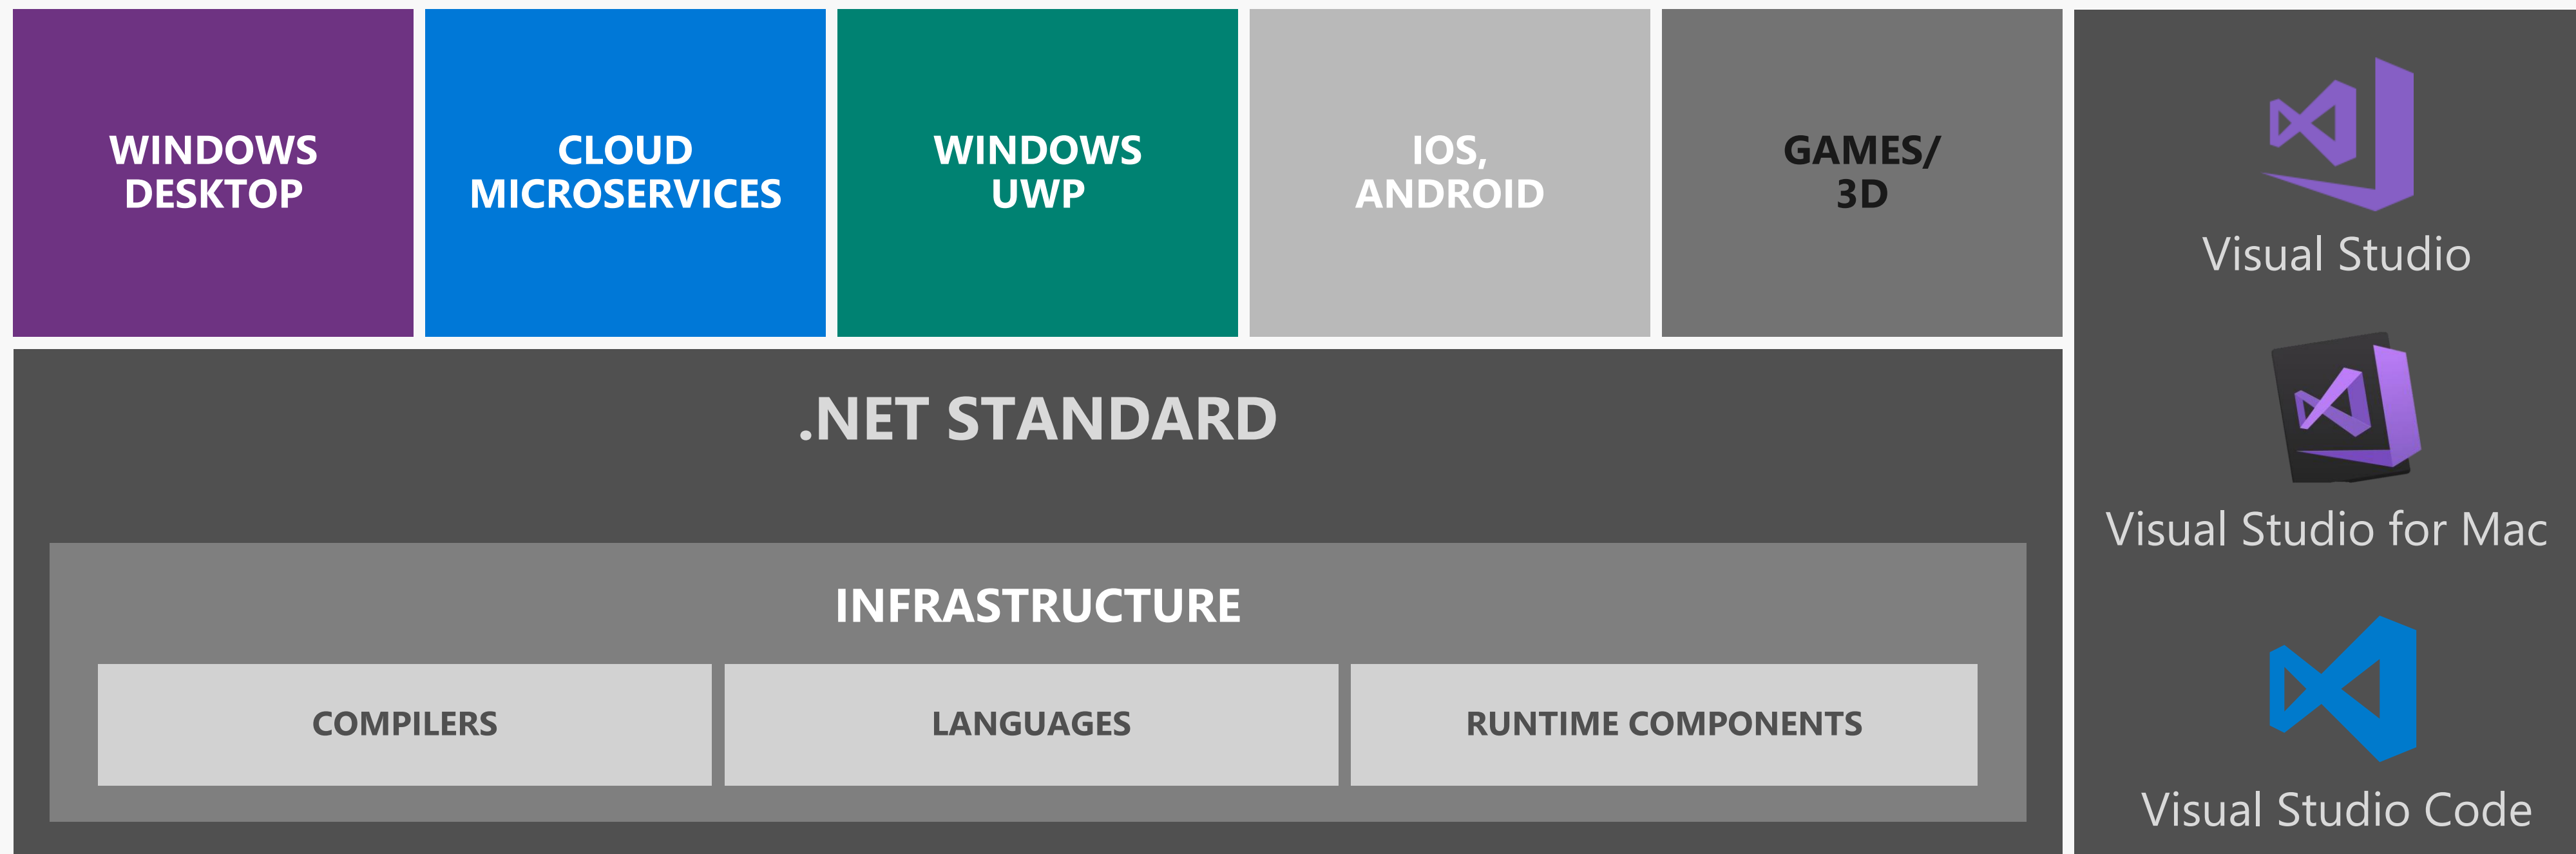

No recompile required – also covers existing NuGet packages

Limited to libraries that only use APIs that are available for .NET Standard

~70%

of NuGet packages
are API compatible

.NET Standard

.NET Standard allows sharing code, binaries, and skills between .NET client, server, and all flavors

.NET Standard provides a specification for any platform to implement

All .NET runtimes provided by Microsoft implement the standard

ASP.NET Core

Developers Delight

N e w P r o j e c t T e m p l a t e s

CLI & VS2017 now share project templates

New in 2.0:

- SPA templates for Angular & React
- Razor Pages with Auth options
- Auth using Azure B2C

2-factor auth using Authenticator apps

Simplified default Experience

- Many defaults encapsulated in new API:
WebHost.CreateDefaultBuilder
- All ASP.NET Core packages now referenced by default (on .NET Core only) so APIs are easy to discover
- A single ASP.NET Core version number to reason about (on .NET Core only)
- Configuration & loggers in DI container
- Logger filtering via configuration by default
- DI scope validation on by default in Development

.NET Architecture

Architecture Guidance

Common application patterns with .NET

Practical advice, best practices, and sample applications to help you implement different application patterns using .NET

Architecture Guides

Microservices and Containers

Microservices are small, modular, and independently deployable services. Docker containers (for Linux and Windows) simplify deployment and testing by bundling a service and its dependencies into a single unit, which is then run in an isolated environment.

- 📖 Architecture eBook (draft)
- 📖 DevOps eBook (draft)
- 📁 Sample App
- 📁 Patterns

Web Applications

ASP.NET Core allows you to build high-performance, cross-platform web applications. Patterns like MVC and built-in support for Dependency Injection allow you to build applications that are easier to test and maintain.

- 📖 eBook (draft)
- 📁 Sample App

Cloud Applications

Production ready cloud applications need to be built for scalability, monitoring, management, security, resiliency, and more. The patterns covered in this guidance include example implementations for Microsoft Azure.

- 📁 Reference Architectures
- 📖 Best Practices
- 📁 Patterns

Mobile Applications

Xamarin allows you to build native Android, iOS, and Windows applications using .NET. Common patterns, such as MVVM, combined with good application layering, will maximize code sharing and result in an application that is easier to understand, test and maintain.
